2	AUX 2	In-Ear, XLR W, Wireless	Gerf – Git, Keys, Back-Voc
3	AUX 3	In-Ear, XLR W, Cabel	David - Drums

Stagelight:

- **A gloomy, dark stagelight. Not too bright!! In the best case blacklight combined with blue, red and violet light. Strobe-effects and haze/fog are very welcome. All in all, it should be a mystical scenery.**

Note:

- **6 socket power distributor (AC) in front of the vocals, behind all Amps and on the drumriser!**
- **All of our stuff works with 220 Volt!**
- **We play on 4 amps. Consider that we need enough space!**
- **The stage should be clean and free of any cables crossing the area in which we move!**
- **We need an area to present our merchandise!**

We have with us:

- **A not flammable (mesh) banner with 2x2 meters!**
- **3 blacklight (UV) LED bars (162 Watt together) with stands we place on the stage!**
- **If we will come with our sound engineer, please take care of the channel-list! In this case, we will inform you in advance.**
- **We come with three In-Ear-Monitoring systems.**

If there is anything that cannot be accomplished, please tell us well enough in advance so we can work it out together. We are happy to help!
